Rational® Development and Test Environment for System z® **Integration & Migration Services**

The ITC Rational Development and Test Environment (RD&T) for System z Integration and Migration Services provide a full range of on-site and remote services to implement Rational RD&T for System z within your enterprise.

Building on 3 years of hands-on experience with RD&T and the underlying IBM® 1090 and 1091 technology in conjunction with our 30 years of mainframe development and support background, ITC has developed a set of utility applications and tools to migrate user data, libraries, and database and application environments.

This service can assist in the implementation of RD&T for either a small project or enterprise-wide development and test. Full configuration, implementation and integration assure your project a successful completion in the shortest amount of time.
